

» THE URBAN LEADERSHIP LAB «

ENTREPRENEURSHIP. MENTORSHIP. ROBOTICS. CODING. COMMUNITY SERVICE.

“Founded by eMerging Entrepreneurs, Inc., The Urban Leadership Lab™ is a tech and startup incubator; providing young people (K-12) with access to the kinds of resources that will advance their capacity to do (and become) their best! Our program brings together non-profits, community & faith leaders, industry executives, university personnel, and volunteers to introduce creative ways of engaging our community's under-served youth. Just as our non-profit organization uses Entrepreneurship as a pathway for community development, our lab aims to surround young people with startup tools, leadership training, and community service opportunities; all in an effort to help our teens unlock the full range of their potential! Not only were we selected to contribute to the “Computer Science for All” campaign (launched in coordination with the Obama Administration's 2016 STEM education initiative) as one of its ongoing service organizations, but we've also joined forces with EdX, The Emily Krzyzewski Center, First Lego League, The LEGO Foundation, Infinite Scholars, and others to offer a productive & safe environment for kids to explore their creativity. Programs include:

1. STEM programs, ranging from LEGO robotics education to an online coding academy;
2. Online & classroom-style entrepreneurship courses that introduce young people to the core functions of business development;
3. EdX courses from Harvard, Microsoft, MIT, and other institutions in disciplines ranging from mobile app development to leadership; and
4. Group achievement, mentorship, and community service programs to help our young people fully envision themselves in positions of leadership!”
